

DESN2000-SENG

Engineering Design and Professional Practice

Assessment Guide

Term 2, 2026

Final Report (30 %)

Updated Requirements, Accessibility Report, Testing Report (at least 2 iterations) and the Final Prototype

Task

The Final Report will focus on your ability to apply the “Prototype” and “Test” and **iterate** your solution to the defined problem. You should have now completed at least 2 iterations (or at least 2 sprints!) of the prototype testing phase, each time taking in feedback from your users and using it to update your requirements, aspects of your design, and any other relevant material. Perhaps you have found in your testing, that you would benefit from having another persona or another scenario, some of your requirements have shifted? The beauty of this process is that it is iterative and allows you to go back at any time to tinker and make changes that will improve your final product! As part of this deliverable, you will work on:

You need to have:

- (i) Updated Software Requirements (in JIRA)
 - a. Keep a log of which requirement was changed and what feedback prompted the change, make sure that your process is documented!
- (ii) Accessibility Report (in Confluence, or as a separate document to be submitted on Moodle)
 - a. Discuss specific ways in which your prototype is meeting certain accessibility criteria
 - b. Please use the checklist <https://www.w3.org/TR/2006/WD-WCAG20-20060427/appendixB.html> to guide your discussion – which guidelines have you met and which ones you will be working towards in future iterations? Please note that you will not be able to meet all of these guidelines in a prototype, as some of these are only possible in the final product, in this case, you can mention that it is not applicable or how you are planning on incorporating the guideline.
 - c. Feel free to use this as a template guide to help you structure your discussion: <https://www.w3.org/WAI/test-evaluate/report-template/>
 - d. Another resource you can use to supplement the WCAG guidelines (in a more user friendly terms): <https://www.a11yproject.com/checklist/>

- (iii) Testing Report - at least 2 iterations/sprints (in Confluence, or as a separate document to be submitted on Moodle)
 - a. Rationale for testing
 - b. A clearly articulated acceptance criteria that was used in testing/what test cases were used?
 - c. Results of testing – which acceptance criteria were passed/failed
 - d. Any other feedback received during testing
 - e. Document any changes that were made based on the testing – make sure to be clear what feedback was used in any of the updates that you had made.
 - f. Clearly state any issues that were persistent during testing across multiple users, and what impact those issues had.
- (iv) Final Prototype
 - a. Provide a link to your final prototype
 - b. Your final prototype should be of high fidelity
 - c. Prototype should show a high degree of interactivity fidelity
 - d. Prototype should show a high degree of visual fidelity
 - e. Prototype should show a high degree of content fidelity
 - f. Prototype will clearly demonstrate at least five information architecture principles
 - g. Prototype will clearly demonstrate at least three visual hierarchy principles
 - h. Prototype will clearly demonstrate at least five UI principles
 - i. Prototype incorporates at least five accessibility requirements from the WCAG checklist

Guidance for your report:

- 1) Address the above task as best as possible – make sure you have clear justifications for your decisions – this is where all that wonderful user testing and feedback comes into play! Make sure you clearly show any changes that were made addressing any testing.
- 2) Look for opportunities to build on concepts taught in class and workshop activities

Table 1 Summary of crucial assessment details

Type	Group
Submission	JIRA with associated Confluence documentation (as needed) and prototypes
Due date	Week 11 – 11 PM, Thursday August 13 th
Weighting	30%
Word limit	Accessibility Report (1000 words) / Testing Report (1000 words)
Marking	Marked by demonstrators and moderated by coordinators (on Moodle)
Team evaluation	Peer Review Module will be available on Moodle once the submission deadline has been met
Penalties	-5% of max mark per day for late submissions (no submissions will be accepted after 5 days)

Submission

Submission via JIRA and Confluence (as needed), and any associated prototypes included also.

Marking

The assessment will be marked by your course demonstrator and moderated by course coordinators. The marker is your workshop demonstrator. The submission is worth 30% of your final grade. Marks and feedback will be returned within two weeks of submission. The marking rubric outlines how your final report will be marked. Please read it and the rest of this guide carefully.

	0	1	2	3
Updated requirements				
Clear traceability of which requirements have been updated as a result of testing	No log	Some changes shows		All changes documented
Accessibility Report				
Rationale for including accessibility in the prototype	No	Somewhat	Yes	
Clear link to acceptance criteria or user stories based on accessibility	No	Somewhat	Yes	
Using the WCAG checklist and guidelines to guide the discussion of accessibility of prototype	No	Somewhat		Always
Recommendations based on the checklist included for those items that can only be put in place in final coded solution	No	Somewhat	Always	
Results of checklist documented, and any actions specified (what may need changing and how it will be changed)	No	Somewhat		Always
Overall quality of accessibility report	Low	Average	High	
Testing Report				
S1: Test plan shows clear articulation of test cases based on acceptance criteria	No	Somewhat		Yes
S1: Testing outcomes summary shows clear consequences	No	Somewhat		Yes
S1: Testing outcomes summary shows a clear link to what was tested	No	Somewhat		Yes
S1: Testing outcomes summary – overall quality	Low	Average		Above Average
S2: Test plan shows clear articulation of test cases based on acceptance criteria	No	Somewhat		Yes

S2: Testing outcomes summary shows clear consequences	No	Somewhat		Yes
S2: Testing outcomes summary shows a clear link to what was tested	No	Somewhat		Yes
S2: Testing outcomes summary – overall quality	Low	Average		Above Average
Overall quality of test plan	Low	Average		Above Average
Final Prototype				
Prototype exhibits high fidelity across interactivity	No	Somewhat	Yes	
Prototype exhibits high fidelity across visual scale	No	Somewhat	Yes	
Prototype exhibits high fidelity across content scale	No	Somewhat	Yes	
Prototype will clearly and well demonstrate at least five information architecture principles	None	1 or 2	3 or 4	5 or more
Prototype will clearly and well demonstrate at least three visual hierarchy principles	None	1	2	3 or more
Prototype will clearly and well demonstrate at least five UI principles	None	1 or 2	3 or 4	5 or more
Prototype incorporates at least five accessibility requirements from the WCAG checklist	None	1 or 2	3 or 4	5 or more
Overall quality of the prototype	Low	Average		Above Average
Presentation				
Document is logically ordered and easy to understand Written clearly within the word limit Uses figures, tables and graphs to effectively communicate ideas Good spelling and grammar Consistent presentation	No	Somewhat	Almost	Always

Table 1 Marking rubric – final mark is scaled to 30% of grade
